

**HIGH  
AVAILABILITY**  
DISASTER RECOVERY

# Pulsar360, Inc. High Availability

Pulsar360, Inc. HA is a commercially developed High Availability solution that has reworked the Pulsar360, Inc. platform to integrate DRBD, Cluster Manager and Pacemaker. This enables automatic mirroring and failover between two Pulsar360, Inc. Systems.

## Pulsar360, Inc. HA Disaster Recovery

Pulsar360, Inc. High Availability gives you more protection against hardware, software and storage failures.

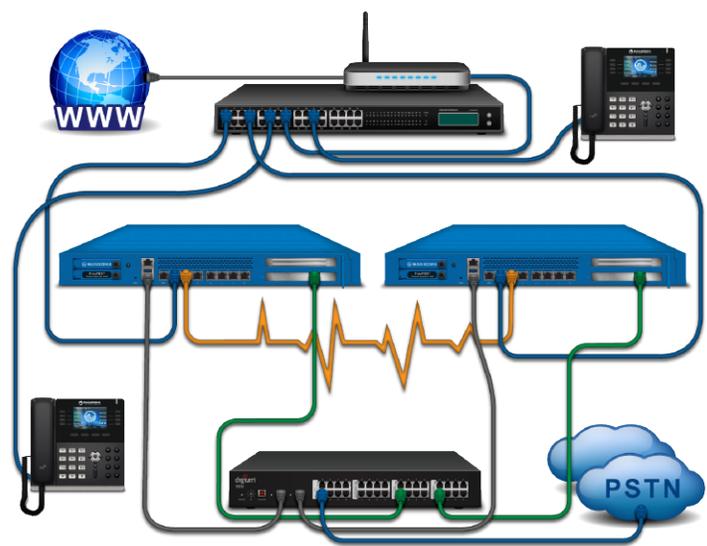

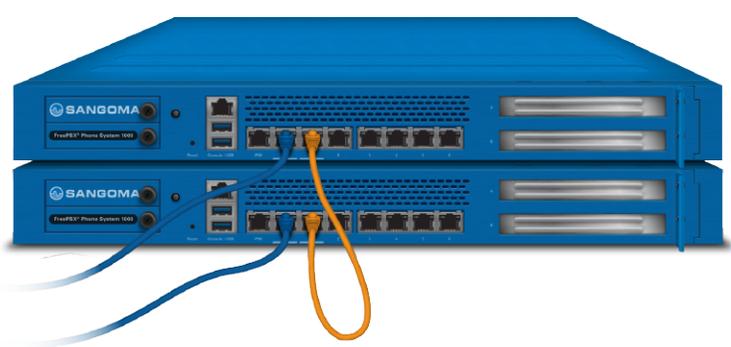

Your phones and devices are registered to a floating IP address, so the failover between systems will be transparent to them. Your SIP Trunks will register to the active node, and if utilizing a PSTN Failover Appliance (optional), your T1 or Analog lines will be directed to the active node as well.

Then when the primary PBX is repaired or recovers, you can switch back to the primary Pulsar360, Inc. node in just seconds.

Available Add-ons include:

- » SIPStation SIP Trunks
- » PSTN Failover Appliance
- » PSTN Cards
- » Sangoma IP Phones
- » Support

Setup and configuration of Pulsar360, Inc. HA is done in the Pulsar360, Inc. GUI, which you can also use as an online management tool to easily switch between nodes.

Here is an overview video of Pulsar360, Inc. HA:
